Tennis Court Monitor: Setup Guide

Finds open LA Pay Tennis courts for you and shows them in one easy page. It only **looks** for openings. You still book on the official LA Rec & Parks site. You need: a Mac, an internet connection, and your free LA Rec & Parks login. Setup takes about 5 minutes.

1 Unzip and open the folder

Double-click **tennis-monitor-share.zip**. Move the **tennis-monitor** folder somewhere you will keep it (for example, your Documents folder).

2 Open Terminal

Press **Command + Space**, type **Terminal**, and press **Enter**. A window with a blinking cursor opens. This is where you type the commands below.

3 Point Terminal at the folder

Type **cd** and a space (do not press Enter yet). Then **drag the tennis-monitor folder** from Finder into the Terminal window and press **Enter**.

```
cd (drag the folder here)
```

4 Run the setup

Type this and press **Enter**:

```
./setup.sh
```

It installs everything and takes a few minutes. If your Mac asks to install **developer tools**, click Install, wait, then run the command again. If you see "permission denied", type **chmod +x setup.sh** and try again.

5 Log in when the browser opens

A browser window opens on the LA Rec & Parks site. **Log in with your own account**, then return to Terminal and press **Enter**. Your login stays on your computer only. Setup then schedules a check every day at 8:00 AM.

6 Choose your courts and times (optional)

Open **config.yaml** in TextEdit (right-click, Open With, TextEdit). Delete any park you do not want from the **locations** list, and change **days** and the **earliest / latest** times to match when you want to play. Save the file.

7 Run your first check

Back in Terminal, type this and press **Enter**:

```
.venv/bin/python monitor.py && open report.html
```

A page opens showing open courts for the next 8 days, one card per park.

Reading the report

Date buttons at the top: click a day to see only that day. Click **All dates** to go back.

Green = Mon-Thu evenings (5-8 PM). **Blue** = weekend mornings (8-11 AM). **Gold outline** = new since the last check.

Click any time slot to open the official site, then book it there. The daily check runs only while your Mac is on and awake.

If something goes wrong

"Session expired" or no results: your login timed out. Run **`.venv/bin/python monitor.py --login`** and log in again.
Errors mentioning 403: open config.yaml, change **`headless: true`** to **`headless: false`**, and save.
Stop the daily check: **`launchctl bootout gui/$(id -u)/com.user.tennismonitor`**
Privacy: never share the **session.json** file (it holds your login). Please also follow the LA Parks website terms; checking once a day is plenty.
